Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 1771

1. 35 U.S.C. 112, first paragraph, requires the specification to be written in "full, clear, concise, and exact terms." The specification is replete with terms which are not clear, concise and exact. The specification should be revised carefully in order to comply with 35 U.S.C. 112, first paragraph. Examples of some unclear, inexact or verbose terms used in the specification are: found throughout the specification, particularly in sentences which run from the bottom of one page to the top of the next page, wherein in these sentences many letters, some if not all of which are vowels, are missing from the sentence. Accordingly, the specification should be corrected so as to remove all of these informalities.

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. More particularly, several translation related and also other informalities remain in the claims and need to be corrected. In claim 1 and elsewhere the phrase, "used for optical member" is vague and indefinite, as is the longer phrase containing this clause found in lines 1 and 2 of claim 4. In claim 3, line 2, after "film" insert --base--, and in claims 5-8, last line of each, "on" should be --to--.

Finally, in each of the independent claims 1 and 4 the phrase "having functional groups copolymerizable..... component (a) and the component (b)" is unduly vague and indefinite in that it is believed to read upon many non contemplated embodiments

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Imono et al, US 6,899,949 (US 2003/0219592 is cumulative). Note particularly the Abstract and the Figure, Col1, lines 12-34, Col 2, line 47- Col 3, line 25, Col 4, lines 21-67, Col 5, lines 24-52, Example 1, Col 9, lines 36-47, Table 1, claims 7 and 10). The reference, having three of the four coinventors of the present application and a common assignee, clearly discloses the claimed three layer pressure sensitive adhesive coated article wherein the Treated layer 1 is believed to be the apparent point of novelty; note particularly Co 5, lines 37-52, which teaches the three copolymer monomers utilized in the claim 1 treated layer structure, and also Example 1, wherein the ethylcellulose is also believed to furnish a hydroxyl functional group to the crosslinked copolymer used to form the treated layer. Additionally, the utilization of the formed protective tape in optical films, articles and methods of using the same are each clearly disclosed.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Note also the PGPub of the present application, US2004/0151903 to Niino et al.
